

# RMSynergy Fashion

The RMSynergy Fashion Module brings a fast and effective way to create and find items based around specific attributes.

With new clothing lines arriving all the time, retailers need a fast and effective way of adding these items into the stock inventory.

Additionally, the time taken to establish whether there is stock of an item in a certain style, colour, size etc can be the difference between securing or losing a sale. RMSynergy Fashion provides the user with an easy to use interface for defining, managing and selling items based around an unlimited set of attributes.

## Features

- Unlimited numbers of attributes and values
- Fast Item creation / searching
- Auto numbering of new items coupled with auto description
- Easy to view 3D item attributes (Size, colour, style etc).

## Advanced Features

- Ability to purchase order items based around sale patterns
- Unique ability to add to existing attributes to reflect fashion trends
